*History/Lameness Exam Findings: _____

*Athletic modality/use: _____

*Previous Radiographs: Yes No

*Previous Ultrasound: Yes No

*Foreign Metal Object Present: Yes No

*Current Therapy: _____

*Select MRI Type:

- 3T MRI** - Each patient should have a physical exam, CBC, and/or chemistry panel to ensure safe general anesthesia (approximately 1.5 to 2 hours). If available, send lab results with this referral. Strongly recommended arrival by 2:00pm the day prior to appointment but must arrive no later than 7:00am the day of MRI. A member of our team will contact you with a discharge time after imaging is complete. All shoes will need to be pulled. This can be done at Animal Imaging for an additional fee.
- Standing MRI** - Standing MRI is available for feet, pasterns, and fetlocks only. Patients will require prolonged light sedation. All shoes will need to be pulled. This can be done at Animal Imaging for an additional fee. It is strongly recommended to arrive by 2:00pm the day prior to appointment but must arrive no later than 7:00am the day of MRI. Due to the uncertainty of imaging time, it is possible that the patient will need to stay overnight. A member of our team will contact you with a discharge time after imaging is complete.

*Additional exam that you are prescribing: _____

*Other comments, including but not limited to, any other known medical diagnosis/concerns (especially cardiac related):

- I certify that I am a licensed veterinarian that has performed a physical examination on the aforementioned patient and am submitting this referral on their behalf.*

*Veterinarian's Signature: X _____
